ESTIMATING AND CORRECTING THE EFFECTS OF MODEL SELECTION UNCERTAINTY

Cuvillier Verlag Nov 2015, 2015. Taschenbuch. Book Condition: Neu. 211x146x13 mm. Neuware - Most applied statistical analyses are carried out under model uncertainty, meaning that the model which generated the observations is unknown, and so the data are first used to select one of a set of plausible models by means of some selection criterion. Generally the data are then used to make inferences about some quantity of interest, ignoring model selection uncertainty, i.e. the fact that the selection step...
